K) Protocols and specifications of the gaming system

Both games (server-side logic) and platform are developed entirely with the Java Language.

 Game was provided through the following URLs on a QA environment:
 - <https://quinel.thunderkick.com/games/> (player’s interface)
 - <https://qa-int-backoffice.thunderkick.com/> (Back office / Admin interface)
 - <http://ext-qa-gameservice.thunderkick.com/> (Runtime game configuration)

 The QA environment used for RNG testing relies on a Linux environment hosted by Amazon’s cloud services and runs on Oracle Java JDK 1.7.0_09, Apache Tomcat application server 7.0.42

Live environment is reachable at the following IPs (primary site, secondary site omitted):

Game traffic: 37.114.73.113

API: 37.114.73.114

Back office 37.114.73.115

Firewall 37.114.73.120

Live environment servers are running Linux “Ubuntu 12.04.5 LT; Precise Pangolin”, with Oracle Java JDK 1.7.0_51, Apache Tomcat application server 7.0.50.

Simulation environment for game testing used a virtualized server with the same Linux distribution “Ubuntu 12.04.5 LT; Precise Pangolin” with Oracle Java JDK 1.7.0_76 – no application server was required.

The difference between the Java JDK is negligible considered the change log and that the source code inspection couldn’t find any specific binding to those releases nor dependencies on system APIs. Same considerations apply with regards to differences between QA and Live environment.

(c)	integrate contingencies for loss of continuity of play; and	<i>PASS</i>
(d)	if utilised in any peer to peer game, ensure that over the specified periods that no one Player has any advantage over any other Player playing the same game	<i>N.A.</i>
2.	Both the gaming and financial transactions software must be congruent and secure.	<i>N.A.</i>
3.	The System must satisfy the following criteria for randomness for any Gaming or Lottery (save where different rules apply and have been approved by the Commissioners and published to the Participant or potential Participant prior to its participation), following Schneier:-

	(b) the data must be unpredictable, i.e. it must not be computationally feasible to predict what the next number will be, given complete knowledge of the algorithm or hardware generating the sequence, and all previously generated numbers; and	<i>PASS*</i>
	(c) the series cannot reliably be reproduced, i.e. if the sequence generator is activated again with the same input (as exactly as humanly possible) it will produce two completely unrelated random sequences.	<i>PASS*</i>
4.	The Operator must disclose the methodology of any random seeding and any seeding must be proven to result in an unpredictable output.	<i>PASS*</i>
5.	The outcome of any Game or Lottery, as the case may be, and the return to the Participant, must be independent of the CPU, memory, disk or other components used in the computer or other device used by the Participant	<i>PASS</i>
6.	The Game or Lottery outcome, as the case may be, must not be affected by the effective bandwidth, link utilisation, bit error rate or other characteristic of the communications channel between the System and the computer or other device used by the Participant.	<i>PASS</i>
